

MIRACLES OF ISLAM

UNIVERSE ORIGIN

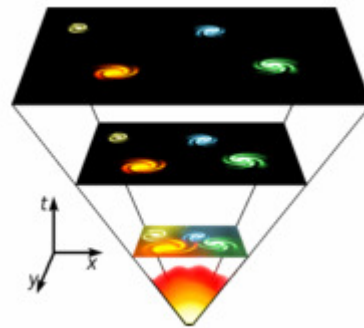

UNIVERSE ORIGIN (POSSIBILITY):

MODERN SCIENCE: Tell us that the universe emerged or initially existed as small atom that exploded resulting in what we call today an expanding universe (both the heavens and earth created out of a single nuclei "BIG BANG THEORY").

Big Bang

According to the Big Bang model, the Universe expanded from an **extremely dense and hot state and continues to expand today**. A common analogy explains that space itself is expanding, carrying galaxies with it, like raisins in a rising loaf of bread. The graphic scheme right is an artist's concept illustrating the expansion of a portion of a flat Universe.

The Big Bang is the cosmological model of the initial conditions and subsequent development of the universe that is supported by the most comprehensive and accurate explanations from current scientific evidence and observation. As used by cosmologists, the term *Big Bang* generally refers to the idea that the Universe has expanded from a **primordial hot and dense initial condition (PRIMEVAL ATOM)** at some finite time in the past (currently estimated to have been approximately 13.7 billion years ago), and **continues to expand** to this day.

The Above article has 3 important findings that explain how the universe emerged, what was the initial condition of it and that it continues to expand:

1. **primordial hot and dense initial condition**
2. **continues to expand**
3. **primeval atom**
